Background
GRAPHIC: Niger food crisis hits critical level
FIND A CHARITY: Aid groups respond to Niger food crisis
FACTBOX: Key facts about Niger's food crisis
TIMELINE: How Niger's food crisis unfolded

LONDON (AlertNet) - Following is a list of non-governmental organisations responding to humanitarian needs in Niger.
While every effort has been made to provide as comprehensive a list as possible based on the latest information, it may not be complete.
AlertNet member NGOs involved in relief work in the region that are not included are urged to write to us at alertnet@reuters.com and publish information directly on the NGO latest.
For contact details of AlertNet members please click on the links to the right. You can also search for relief organisations using our NGO Directory in the left-hand navigation bar.

Action against Hunger
At the end of July 2005, ACF will begin providing food for about 20,000 families, and treating malnutrition in 27,000 children under five years old. ACF is working in the Dakoro, Keita, Mayayi and Tahoua regions.

Action by Churches Together (ACT) - Switzerland
ACT members Swiss Interchurch Aid (HEKS) and Lutheran World Relief (LWR) have been working in Niger for many years. HEKS

Oxfam Press Release - 03 August 2005

Oxfam: Rich countries ignoring food crisis in Mali

Over one million people in Mali are at risk of a major food crisis gripping West Africa because rich countries have not responded to the call for emergency funds, warned international aid agency Oxfam today.

Only a fraction - 14 per cent - of the \$7.4m requested by the World Food Program to avert the crisis in Mali has been received since the appeal was launched in December 2004.

By contrast, in neighboring Niger, the World Food Program appeal is now 57 per cent funded, with more money on the way, following intense media coverage over the last two weeks. 3.6 million people are facing a major food crisis in the country.

"Now that the media spotlight is focused on Niger, the world has finally started responding to the crisis there. But this is not just about Niger. This food crisis is affecting countries across West Africa, particularly Mali. The Mali government, international donors and the World Food Program have started distributing food, but it is not enough. Donors have a window of opportunity. They can help to avert a major food crisis in Mali, but they must act now," said Natasha Kofoworola Quist, Oxfam Great Britain's Regional Director for West Africa.

1.1 million people in Mali are at risk and, despite the efforts of the country's government, the World Food Program and NGOs, the most remote nomadic communities are still not getting the help they desperately need. The most affected areas are Timbuktu, Gao and Kidal in the north of the country.

Oxfam's food support program in the Gao region in northern Mali was launched in March and will benefit 50,000 people. Work has also been done to prepare people for the possibility of another locust invasion.

"Governments must fully fund the World Food Program appeal for Mali immediately. Every moment that they delay, more lives are put at risk," said Quist.

The West African Food Crisis

Poverty Indicators (2003)

Indicator	Niger	Mali
Per capita income	\$220	\$300
Life expectancy at birth	46.4	40.6
Under 5 child mortality rate per 1000	262	220
Ranking: UN Human Dev. Index (out of 177 countries)	177	174

Nature of the Crisis in Niger

- NOT a disappearance of food
- The Perfect Storm:
 - Widespread & increasing poverty
 - West Africa-wide shortfall in grain and pasture production (drought & locusts)
 - Grain production fell by 11% relative to 5-year average.
 - Substantial, but localized destruction of pastures by locusts
 - Higher transport costs due to increase in fuel prices
 - Led to two food crises:
 - An income collapse, especially for pastoralists who did not migrate in time
 - A pricing of the poor out of the market, especially in the more commercialized areas along the Nigerian border

The 2005 Price Crisis in Niger

Source : Bulletin Afrique Verte et SIMA as presented in Terpend (Dec. 2005)-
WHO,CILSS & FEWS NET

Role of Nigeria: The Giant Next Door

- 10x the population; 8x the grain production
- Price increases in Nigeria due to:
 - Production falls in Nigeria and in neighboring countries (e.g., Chad)
 - Increased food aid local procurement (e.g., for Darfur)
 - Nigeria's policy reactions to short production
 - Buying for national security stock
 - Border restrictions

Role of Nigeria: The Giant Next Door

- Agricultural protection policy
 - Overseas grain imports restricted (e.g., rice), leading to a shift in demand for coarse grains.
 - Ban on poultry imports → increase in maize demand

- Appreciation of the Naira

Net effect: Trade reversal

Compounded by trade restrictions
by Burkina & Mali

Managing the Crisis in Niger

- Poor public information regarding nature of crisis → speculative buying
 - Political denial and disputes between government & NGOs (especially MSF) on size & severity of the problem
 - Local purchases by WFP & others contributed to price spike in July
 - Donor attention was elsewhere (tsunami)
- Result: Many poor were priced out of the market

The Crisis in Mali

- Faced many similar conditions to Niger:
 - Widespread poverty, but somewhat better growth record
 - At least 30% of Malian children show signs of long-term malnutrition
 - Also had suffered 2003 shock
 - Similar shocks: drought, locusts & higher transport costs
 - Doesn't live next to Nigeria, but does live next to Cote d'Ivoire

The Crisis in Mali

- Also faced currency depreciation
- Had new Food Security Commission (CSA) that had mandate to manage the crisis

The Crisis in Mali

- Like Niger, Mali faced sharp price spikes for both coarse grains and rice
 - Production shortfall
 - Export demand
 - Local purchases for food aid

What was different in Mali?

- Political leaders acknowledged & embraced the crisis—took early action:
 - Geographically targeted food aid distributed to hard-hit areas beginning in Oct. 2004 (to stabilize the population)
 - Subsidized grain sales by OPAM in hard-hit areas
 - Actions to generate local incomes in affected areas
 - Cereals banks in outlying zones of urban areas
 - Early actions took place outside of “normal” channels (PRMC) & were initially opposed by some donors
 - Important psychological effects of early action

What was different in Mali?

- Had better information base, which reduced panic buying
- Gov’t engaged the private sector as an ally, focusing on imports rather than local purchases.
- Began community-level food security planning to address the problem on a long-term basis
- Result: Many people suffered, but no widespread starvation, and the basis is being laid to reduce frequency of future crises

Building Long-Term Food Security: Development of Local Food Security Plans

- Aim is to help Mali's 703 communes, 49 cercles, & 8 regions develop their own food security programs
- Based on 3 pillars of food security:

Regions Covered

- 2004-2005: Gao and Sikasso
- 2005-2006 : Mopti, Tombouctou, Kayes and Kidal

Facilitating the Development of Local Food Security Plans

Training of trainers
(mayors, CCC,
women's group leaders,
local press) in concepts
of food security

- They in turn return to local communes to work to:
 - Establish priorities
 - Inventory local resources & projects
 - Identify gaps

Facilitating the Development of Local Food Security Plans

- Commune plans are then brought together at cercle & regional levels
- Aim: Link locally defined priorities to nationally funded programs Put local people in charge of the agenda.
- Multidisciplinary approach, involving economics, agriculture, governance, health, etc.

Facilitating the Development of Local Food Security Plans

- Enthusiastically received at local levels
- Examples of constraints sited:
 - Bad water
 - Weak land & tree tenure by women
 - Problems of access to inputs
- Examples of emerging proposals

Mali: Looking forward through 2006

- Local planning continuing
- Traumatic effect of 2005 on policy makers
- Heavy buying to reconstitute public and communal stocks
- More resources to build public stocks outside of donor-GOM framework
- Election year in 2007
- Avian influenza

Lessons Learned

- Tools for local crises not sufficient for region-wide crises
- Early intervention helps → Need good information and analytic base
- Access problems can arise with well-functioning markets: Problems of persistent poverty rather than just market failure
- Designing market-friendly food security policies remains a challenge

Thank you!
